

Grade Eight Science
Magnetism & Statics Criterion B Assessment Information Sheet

Objective:

- To individually demonstrate and describe an example of static electricity or magnetism - To individually complete all stages of Criterion B related to the demonstration

MYP Command Terms that are used on Criterion B

State: Give a specific name, value, or other brief answer without explanation of calculator	Outline: Give a brief account or summary
Explain: Give a detailed account including reasons and causes	Describe: Give a detailed account or picture of a situation, event, pattern, or process

Assessment Criteria: Criterion B: Inquiring and Designing

Achievement Level	Task Specific Level Descriptor
0	The student does not reach a standard indicated by any of the descriptors below
1-2	The student: states a research question with limited success states a testable hypothesis states variables - designs a method with limited success
3-4	The student: states a research question outlines a testable hypothesis using scientific reasoning outlines some variables and their manipulation correctly - designs a safe method that outlines how some relevant data will be collected and selects some materials
5-6	The student: outlines a valid research question with minimal error outlines and explains a working hypothesis using scientific knowledge outlines most variables and their manipulation correctly - designs a complete, safe method that outlines how sufficient, relevant data will be collected and selects appropriate materials with minimal error
7-8	The student: - accurately describes a valid research question - correctly outlines and explains a hypothesis using correct scientific reasoning Describes correct scientific reasoning to assign and manipulate variables - designs a logical, complete, safe method that describes how data will be collected and selects appropriate materials

What you have to do:

- Each individual student must choose or design a demonstration related to static electricity or magnetism using 3 OR 4 materials from the list below
- Each individual student must perform the demonstration for the class at your assigned time
- During the demonstration, **explain** to the class the science behind what is happening in the demonstration
- Complete the Criterion B Assessment worksheet for your demonstration
- Submit the Criterion B worksheet on Google Classroom by the due date

A note about Variables on this assessment:

- On this assessment the variables will be assigned a bit differently since we are collecting qualitative data not quantitative data
- On this assessment, the variables will be assigned as follows:
 - **Dependent variable:** What you think you will observing
 - **Independent variable:** What you are changing in order to get this observation(this can be the presence or absence of something)

- **You must select 3 or 4 materials for your demo from the following list (or you may bring your own materials)**
- **You can use materials from either section of the table for your demo**
- **For example, even if you are doing a static electricity demonstration, you may use materials from the magnets materials and vice versa**

Static Electricity Materials	Magnetism Materials
• Fur • Plastic (bag) • Wool • Silk • Polyester • Cotton • Styrofoam • Balloon (rubber) • Plastic rod • Ebonite rod • Glass rod • Rice krispies • Paper Confetti • Electroscope • Styrofoam balls • Aluminum foil	• Horseshoe magnet • Donut shaped magnet • Bar magnet • Mini compass • Lodestone • Iron filings (separate) • Iron filings (in a case) • Aluminum piece • Zinc piece • Iron piece • Copper piece • Aluminum Foil
