

Grades Eight and Nine Science

Rules for Biological Drawings

1. The sheet of paper should be portrait not landscape
2. Make your drawing large. It should take up half a page to one full page. Just make sure to leave enough space for a title at the bottom of the page
3. Justify your drawing to the far left of the page
4. Your drawing should be a line drawing, not a sketch. There should not be any outliers or jagged edges around the edge of the drawing. Don't use a ruler for the drawing.
5. Use a ruler to draw any lines used for labels.
6. Put labels on the right side of the page. Draw a straight horizontal line from the item you wish to label and print the name of the item at the end of the line
7. Do not do any shading on your drawing; use stippling or cross hatch only
8. Print the title of your drawing at the bottom centre of the page. The title should be underlined using a ruler. The magnification should be included next to the name of the drawing if you are viewing a magnified image

REMEMBER: Biological drawings show what you see, not what you think you should see
