

Grade Eight Science - Digestion and Circulation Review Chart

Write the path of food through the digestive system in the chart below	Write important information about the anatomical part in the box below
1. Mouth (1) ↓ 2. Pharynx ↓ 3. Esophagus ↓ 4. Stomach ↓ 5. Small Intestine ↓ 6. Large Intestine (or colon) ↓ 7. Rectum ↓ 8. Anus	1. physical digestion, chewing, saliva ↓ 2. connects the mouth to the esophagus ↓ 3. Peristalsis, mucus, connects pharynx to stomach ↓ 4. Physical and Chemical Digestion, acid, enzymes, surface area (folds), some nutrient absorption ↓ 5. Physical and Chemical Digestion, neutralize, uses enzymes from the pancreas, liver, gall bladder, surface area (folds), most nutrient absorption, peristalsis ↓ 6. Peristalsis, absorbs water from waste ↓ 7. Holding area for waste ↓ 8. Opening that expels waste from the body

Read the name of the anatomical part below	Write important information about the anatomical part in the box below
1. Heart ↓ 2. Vein ↓ 3. Artery ↓ 4. Capillary	1. Strong muscle, contracts and relaxes, pumps blood around the body allowing oxygen to reach body organs ↓ 2. Blood vessel that moves blood toward the heart ↓ 3. Blood vessel that moves blood away from the heart ↓ 4. Network of blood vessels that form where veins meet arteries, location oxygen diffusion NOTES: Diffusion is a process where gases move involuntarily across a semi-permeable membrane. Involuntary means it happens without us having to think about it; it's unconscious Semi-permeable membrane is a barrier that allows some substances to pass through but blocks other substances from passing through
